## **Negative & Zero Values:**

<u>Gross Profit:</u> Minimum of -52,002.78, indicating potential losses due to high costs or heavy discounts. This could be due to selling products at lower prices than their purchase costs.

<u>Profit Margin:</u> Has a minimum of -∞, which suggests instances where revenue is zero or even lower than the total cost, leading to extreme negative profit margins.

Total Sales Quantity & Sales Dollars: Some products show zero sales, indicating

they were purchased but never sold. These may be slow-moving or obsolete stock, leading to inventory inefficiencies.

#### **Outliers Detected by High Standard Deviations:**

<u>Purchase & Actual Prices:</u> The maximum values (5,681.81 & 7,499.99) are significantly higher than the mean (24.39 & 35.64), indicating premium product offerings.

<u>Freight Cost:</u> Extreme variation from 0.09 to 257,032.07 suggests logistics inefficiencies, bulk shipments, or erratic shipping costs across different products.

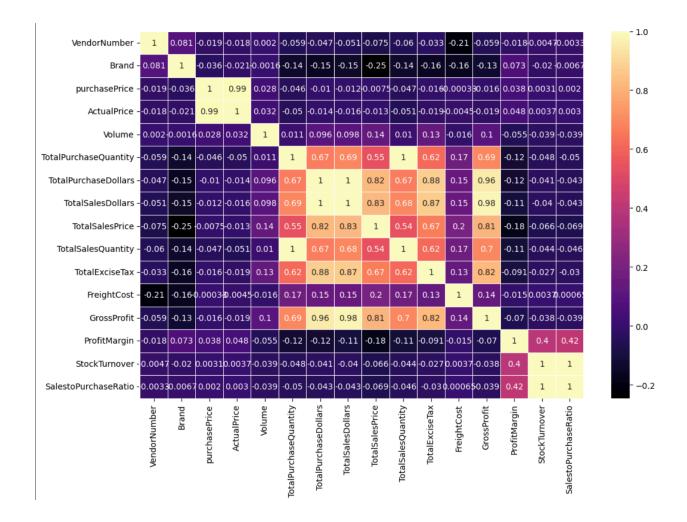

<u>Stock Turnover:</u> Ranges from 0 to 274.5, suggesting some products sell rapidly while others remain unsold for long periods. A value greater than 1 indicates that sales for a product exceed the purchased quantity due to older stock fulfilling orders.

#### **DATA FILTERING:**

To enhance the reliability of the insights, we removed inconsistent data points where:

- Gross Profit ≤ 0 (to exclude transactions leading to losses).
- Profit Margin ≤ 0 (to ensure analysis focuses on profitable transactions).
- Total Sales Quantity = 0 (to eliminate inventory that was never sold).

#### **Correlation Insight:**

Purchase Price vs. Total Sales Dollars & Gross Profit: Weak Correlation (-0.012 and -0.016), indicating that price variations do not significantly impact sales revenue or profit.

Total Purchase Quantity vs. Total Sales Quantity: Strong correlation(0.999), confirming efficient inventory turnover.

Profit Margin vs. Total Sales Price: Negative correlation (-0.179), suggesting

increasing sales prices may lead to reduced margins, possibly due to competitive pricing pressures.

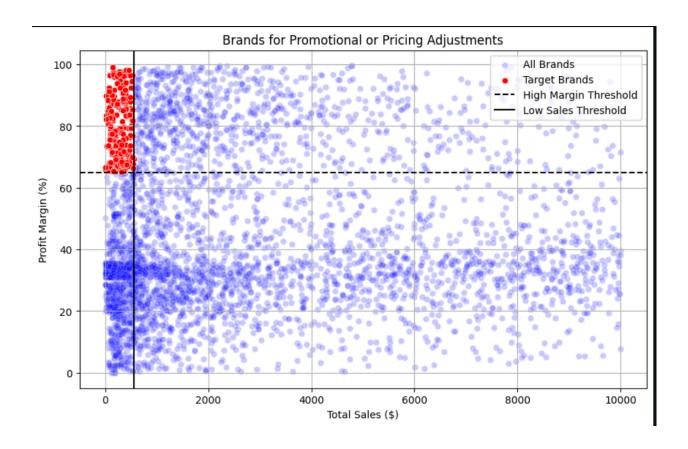

Stock Turnover vs. Gross Profit & Profit Margin: Weak negative correlation (-0.038 & -0.055), indicating that faster stock turnover does not necessarily equate to higher profitability.

## **Research questions and Findings:**

1. Brands for promotional and pricing adjustments

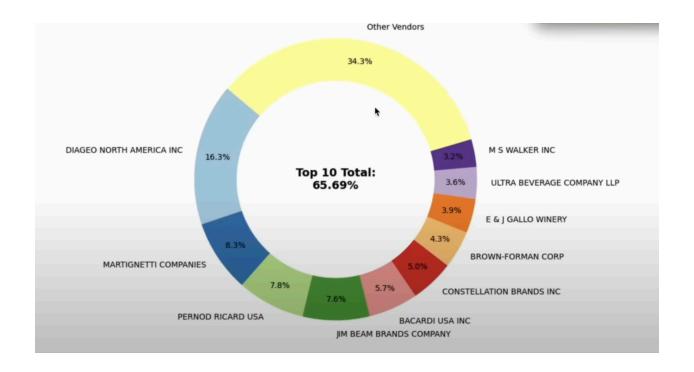

Brand with high profit Margins but low sales							
	Description	TotalSalesDollars	ProfitMargin				
6199	Santa Rita Organic Svgn Bl	9.99	66.466466				
2369	Debauchery Pnt Nr	11.58	65.975820				
2070	Concannon Glen Ellen Wh Zin	15.95	83.448276				
2188	Crown Royal Apple	27.86	89.806174				
6237	Sauza Sprklg Wild Berry Marg	27.96	82.153076				
5074	Nanbu Bijin Southern Beauty	535.68	76.747312				
2271	Dad's Hat Rye Whiskey	538.89	81.851584				
57	A Bichot Clos Marechaudes	539.94	67.740860				
6245	Sbragia Home Ranch Merlot	549.75	66.444748				
3326	Goulee Cos d'Estournel 10	558.87	69.434752				
198 rows	s × 3 columns						

198 brands exhibit lower sales but higher profit margins, which could benefit from targeted marketing, promotions, or price optimisations to increase volume without compromising profitability.

#### 2. Top Vendors by Sales & Purchase Contribution

The top 10 vendors contribute 65.69% of total purchases, while the remaining vendors contribute only 34.31%. This over-reliance on a few vendors may introduce risks such as supply chain disruptions, indicating a need for diversification.

#### 3. Impact of Bulk Purchasing on Cost Savings

Vendors buying in large quantities receive a 72% lower unit cost (\$10.78 per unit vs. higher unit costs in smaller orders).

Bulk pricing strategies encourage larger orders, increasing total sales while maintaining profitability.

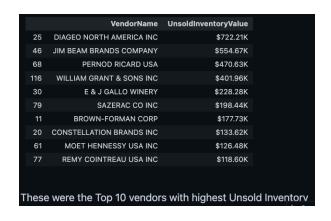

#### 4. Identifying Vendors with Low Inventory Turnover

Total Unsold Inventory Capital: \$2.71M

Slow-moving inventory increases storage costs, reduces cash flow efficiency, and affects overall profitability.

Identifying vendors with low inventory turnover enables better stock management, minimizing financial strain.

#### 5. Profit Margin Comparison: High vs. Low-Performing Vendors

Top Vendors' Profit Margin (95% CI): (30.74%, 31.61%), Mean: 31.17%

Low Vendors' Profit Margin (95% CI): (40.48%, 42.62%), Mean: 41.55%

Low-performing vendors maintain higher margins but struggle with sales volumes, indicating potential pricing inefficiencies or market reach issues.

#### 6. Statistical Validation of Profit Margin Differences

## **Hypothesis Testing:**

<u>Ho (Null Hypothesis)</u>: No significant difference in profit margins between top and low-performing vendors.

<u>H1 (Alternative Hypothesis):</u> A significant difference exists in profit margins between the two vendor groups.

<u>Result:</u> The null hypothesis is rejected, confirming that the two groups operate under distinctly different profitability models.

Implication: High-margin vendors may benefit from better pricing strategies, while top-selling vendors could focus on cost efficiency.

#### FINAL RECOMMENDATIONS:

- **Re-evaluate pricing for low-sales, high-margin brands** to boost sales volume without sacrificing profitability.
- **Use more suppliers** So the business doesn't get stuck if one supplier has a problem.
- Buy in bulk Buying more at once helps you get lower prices and save money.
- **Fix slow-selling items** Buy less, offer discounts, or store them better to reduce waste.
- **Support low-selling vendors** Improve marketing and delivery to help their products sell more.

By implementing these recommendations, the company can achieve sustainable profitability, mitigate risks, and enhance overall operational efficiency.
